Madison Heights, MI | 248-525-7764 | chrisnguyen789@gmail.com | [linkedin.com/in/christopheranguyen](https://www.linkedin.com/in/christopheranguyen) | chrispy-dev.vercel.app | github.com/chrispy-02

Computer Science graduate from Michigan State University focused on backend engineering, application security, and secure software development. Seeking roles as an Application Security Engineer, Security Software Engineer, Backend Engineer, DevSecOps Engineer, Vulnerability Management Analyst, or Security Tools Engineer.

Technical Skills

Languages: Python, JavaScript, SQL, C++, Java, HTML/CSS

Backend & Frameworks: Flask, Node.js, Express, REST APIs, MySQL, PostgreSQL, jQuery, wxWidgets

Developer Tools: Docker, Git, GitHub, GitHub Actions, GitLab CI/CD, Jira, Vercel, Render, CMake, Google Test, Doxygen, VS Code, Cursor

Security Tools & Concepts: OWASP ZAP, vulnerability scanning, Role-Based Access Control (RBAC), authentication, session security, rate limiting, audit logging, Server-Side Request Forgery (SSRF) prevention

Certifications: CompTIA Security+ — In Progress, expected July 2026

Projects

Vulnerability Scan & Detect – Web security scanner platform (CSE 498: McKesson-sponsored capstone) Jan 2025 – May 2025

- Collaborated with a 6-person team to engineer a Flask/MySQL security scanning platform that orchestrates OWASP ZAP scans through GitHub Actions, parses scan artifacts, and centralizes vulnerability findings in a dashboard and report views.
- Designed a 12-table relational schema to support users, roles, websites, scan history, vulnerability records, recurring schedules, API keys, and website sharing workflows.
- Hardened the public demo environment with Docker, demo users, RBAC, secure cookies, scan-target validation, SSRF protections, cooldown logic, and deployment documentation for recruiter review.

ImmunoFlux Clinical – Secure workflow application for allergy operations Apr 2026 – Present

- Developed backend and workflow features for patient scripts, SLIT treatment, extract inventory, compounding queues, vial tracking, label printing, alerts, and clinical data management.
- Secured authentication and session handling with HTTP-only cookies, login/logout/refresh/session endpoints, idle and absolute timeouts, account lockout logic, rate limiting, and security headers.
- Architected a PostgreSQL migration foundation with clinic-scoped data access, structured audit logging, optimistic locking, JSON import/export scripts, and backend permission enforcement.

Personal Portfolio Website – Software engineering and application security portfolio May 2026 – Present

- Launched a responsive portfolio website positioning my work around backend engineering, application security, vulnerability scanning, clinical workflow software, and C++ game development.
- Organized project case studies, resume access, GitHub links, LinkedIn contact, screenshots, demo links, and security-focuses descriptions to make technical work easier for recruiter to evaluate.

Sparty-In-A-Box - C++ animation and simulation software (CSE 335: Object Oriented Software Design) Nov 2024 – Dec 2024

- Created a 2D animation software that includes a jack-in-the-box simulator with crank, gears, and shafts using C++ and wxWidgets.
- Led the team-based UML design of the jack-in-the-box simulator, the only team whose design was approved on the first attempt.

Sparty's Boots - C++ puzzle game (CSE 335: Object Oriented Software Design, group project) Oct 2024 – Nov 2024

- Team created an educational logic puzzle game where the player builds circuits using AND, OR, NOT logic gates.
- Created initial class design, wrote several classes in C++ and wxWidgets, refactored teammates' code, and fixed bugs.

Software Engineering Experience

Webacy Web3 Security Data Analytics Intern Aug 2024 – Sep 2024

Extern – Project based Professional Learning Platform *Remote*

- Analyzed and labeled vulnerability data across 10+ smart contracts to support smart contract risk profiling and security research.
- Performed frequency/correlation analysis and unsupervised clustering on risk tags to identify recurring vulnerability patterns.

Python Tutor Sep 2021 – May 2022

Freelance – Private one-on-one programming instruction *East Lansing, MI*

- Tutored 3 students in Python fundamentals, debugging, and problem-solving through personalized one-on-one instruction.

Education

Michigan State University

B.S. in Computer Science

Minor: Business | Michigander Scholar

East Lansing, MI
