TECHNICAL SKILLS

Languages: Python, SQL/MySQL, JavaScript, C++, Java, HTML/CSS

Frameworks: Flask, Express, Node.js, REST APIs, jQuery, wxWidgets

Tools: Docker, Git, GitHub, GitLab CI/CD, Jira, OWASP ZAP, Google Test, CMake, Doxygen

PROJECTS

Vulnerability Scan and Detect Web Application, McKesson | *Python, MySQL, Flask, OWASP ZAP, Docker* **May 2025**

- Collaborated with a 6-person team to build a web security scanning platform that automated OWASP ZAP scans through GitLab CI/CD and replaced manual CSV-based review with centralized dashboards and reporting.
- Owned the MySQL schema, designing 12 tables to support user access, website management, scan history, vulnerability tracking, and recurring scan scheduling.
- Contributed heavily to the Flask backend and JavaScript frontend, building scan ingestion, website tracking, and historical risk reporting for 100+ scans across dozens of websites with multi-user access for 5+ users.

ImmunoFlux Clinical | *JavaScript, Node.js, Express, HTML/CSS, JSON*

April 2026

- Collaborated with a 2-person team to build an internal clinical workflow application for allergy and immunotherapy practice, supporting injection and SLIT treatment workflows, patient scripts, compounding queues, and extract inventory.
- Designed the system to support a single clinic serving 50-150 active patients at a time, with each patient managing 1-5 allergen extracts across ongoing treatment workflows.
- Implemented clinic-specific workflow logic for vial expiration schedules, remake handling, label printing, alerts, tray-based vial tracking, and inventory subtraction rules, including exceptions for in-house MM dilutions.

Spartyboots Game | *C++, wxWidgets, CMake, Doxygen, Google Test*

December 2024

- Collaborated on a 4-person team to build a modular, event-driven logic circuit simulator in C++ with a wxWidgets GUI, improving frame rates by 25%.
- Contributed to the project's Google Test suite, helping raise code coverage to 92% and reduce regression debugging time by 40%.
- Supported Agile sprint-based development, CMake build automation, and Doxygen documentation, helping cut build setup time by 30%.

EXPERIENCE

Extern | Remote

August 2024 – September 2024

Webacy Web3 Security Data Analytics Intern

- Analyzed and labeled vulnerability data across 10+ smart contracts to support risk profiling and smart contract security research.
- Performed frequency and correlation analysis on risk tags to identify recurring vulnerability patterns and relationships.
- Applied unsupervised clustering techniques to group contracts by shared risk characteristics and surface common security themes.

Freelance Tutor | East Lansing, MI

September 2021 – May 2022

Python Tutor

- Tutored 3 students in Python through personalized one-on-one instruction, contributing to an average grade improvement of 47%.

EDUCATION

Michigan State University, College of Engineering | East Lansing, MI

May 2025

Bachelor of Science in Computer Science, Minor in Business

Honors: Dean's List and University Honors - Spring 2021, Fall 2024, Spring 2025
